

Re Proposed  
wind farms,  
pylons & proposed  
sub station of 20 acres.  
in Mid Wales.

August 8<sup>th</sup> 2011.

Dear Sir,

I am totally against  
any of the above happening  
in mid Wales because — To put  
any more wind farms in Mid Wales  
is definitely NOT the way forward.

There are many ways of producing  
clean electricity like ~~hydro power~~  
hydro power and off shore wind,  
tidal power could also be considered.

Hydro power to my mind, is the way forward  
It would be far less disruptive in its  
construction and far more attractive  
to the eye.

It is a fact that wind turbines

are expensive to manufacture and steel is increasing in price. After being made they have to be transported onto site by huge lorries which would cause havoc on these narrow roads and then at least 200 tons of concrete to bed each of them into position. Concrete manufacture causes massive amounts of pollution into the atmosphere.

With the manufacturing of the turbines and the concrete which would in its self produce pollution to the air, when could it said that the turbines would be producing net clean air after the cost of producing them and the concrete are taken into account?

Please no more wind turbines - leave beautiful Mid Wales alone.
